MOONLIGHT MILE

THE BUILDING HAS A HEIGHT OF 300M. THAT'S WHY THE CRANE'S COCKPIT IS EVEN HIGHER THAN THE TOP OF TOKYO TOWER!

NEIGH-SAYS ARE YOU CRAZY?

GODDAMN, WE HAVE A PROBLEM.

ALL OF THE FACILITIES: THE AIRPORT TOWER BUILDING, AIRPORT CONTROL, AS WELL AS THE HIGH-TECH FLOORS, ARE CENTRALLY MANAGED IN THIS SUPER HIGH-TECH BUILDING!

FOR
COMING!

AAAAH!
THIS
MOMENT IS
THE BEST!
I'M GOING
TO COME!

Helium 3 is a radioactive substance that constantly streams down from the sun. However, Earth's atmosphere blocks out a great proportion of it, and only rare small quantities ever reach the surface of Earth itself.

In contrast, the Moon has an atmosphere, so helium-3 descends directly onto the Moon's surface. As such, a tremendous amount of it has been building up in the Moon's sands these rocket times.

10

In order to make the massive project a reality, we will need to spend several times the amount of the American national budget, and international support is absolutely essential.

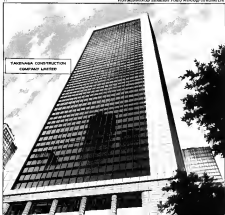

Helium 3 is the most suitable substance for nuclear fusion, with chemistry governing differences of over 90%!

Estimates based on the quantity of helium-3 deposits and current electricity consumption suggest there is ten centes (a tenth) of electricity! Enough to last us for a thousand years!

VAGRANT
SCANS

Oh that time we found the server. The human race
will most likely not exist any more due to global
warming or something.

As important as we are always looking for
reliable staff to help us out the job does
change. At the moment we really need
typewriters and translators, or better
lovely find the only typewriter I?
